OEM CUSTOMIZATION CASE

Five customer-defined requirements

A real private-label project associated with the DUP-ROS-004 random orbital sander. DUPOW confirmed the customer-requested scope and reviewed the accompanying inspection photo set. Customer identity is withheld.

Private label	Customer branding on the tool and its order-specific presentation.
Custom body color	A customer-selected color for the tool housing.
Two-tone dust box	Two-color dust collection box with customer private-label branding.
Retail box packaging	Customer-customized color-box packaging for the order.
Manual sheet	Customer-customized instruction/manual sheet supplied with the project.

Recorded model reference: **DUP-ROS-004**. The source nameplate records a 300 W, 125 mm, 230 V / 50 Hz configuration and a 7,000-13,000 rpm nominal speed range. The standard catalogue configuration and this customized order are reviewed separately.

Actual inspection photograph of the colored housing and internal assembly. The full frame does not display the customer logo; branding and other customized items are described from the confirmed project scope.

Project boundary: This summary describes the confirmed customization scope and recorded physical checks. It does not add sample-revision counts, approval dates, production volumes, delivery results or certification claims. The companion inspection record describes the photographic evidence separately.
