INSPECTION PHOTO RECORD

Product and packing observations

A public summary drawn from 87 source photographs associated with the DUP-ROS-004 customer project. Selected identity-free frames show physical observations; customer-branded packaging, manuals, labels and traceability details are withheld.

Packaging and supplied items	Source photos document carton and retail-pack checks, weights, dimensions, supplied parts and sanding-paper sets.
Product construction	Housing, pad, dust collector, plug, cable, internal assembly, switches and motor components appear in the source set.
Instrument observations	The source set includes component measurement, electrical instrument and rotational-speed photographs. Test conditions and formal acceptance criteria were not established in this public review.

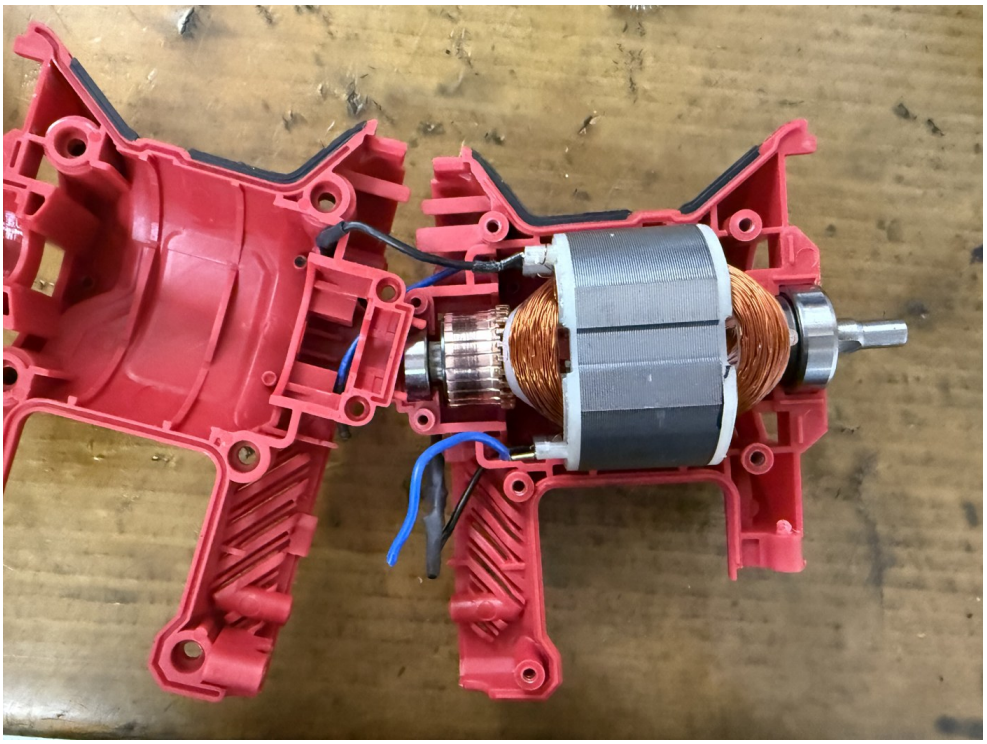

Selected original frame: sanding pad with a measuring tape. The image supports a dimensional observation; no new measurement tolerance or PASS decision is assigned.

Selected original frame: retail-pack dimension check. Customer printing is not visible on this face of the pack; this photograph is not evidence of the artwork approval stage.

INSPECTION PHOTO RECORD

Assembly evidence and record scope

Selected original frame: opened housing and internal assembly. A photograph records the visible condition at the source inspection stage, not the inspection status of every production unit.

What the record supports

Physical presentation, packing and accessory observations, construction photographs, and the existence of measurement/test-instrument records for this customer project.

What the record does not establish

This photo set does not provide a verified inspection date, sampled quantity, sampling plan, defect tally, agreed tolerances, signed disposition or shipment release. No formal PASS/FAIL, electrical-safety approval, dust-extraction efficiency or certificate applicability is added.

For the next order

Confirm the exact configuration, approved sample, collector and accessories, packaging and manual version, destination requirements, sample plan, test conditions, acceptance criteria and written release decision.

Public privacy treatment

Only full frames without visible customer identity were selected. Source originals remain private; web/PDF versions are resized for delivery and carry no source photo metadata. Customized dust-box and accessory contents must not be substituted for the standard product-page configuration.
